

Sample laboratory visit questions

Prepare a supervised discussion; not a laboratory safety manual or access permit.

Fictional demonstration content. Not an operational policy, application form, booking or professional advice. The organisation and contact details are examples. Do not send personal documents or payments. A real operator must review and replace this guide before launch.

Ask about supervision

Discuss induction, permitted activities, supervision and how equipment use is authorised. Request the real laboratory's safety instructions; the original illustrations do not depict inspected premises.

Ask what can be observed without handling equipment and who can answer access questions. Do not arrive at a demonstration address or assume the sample facilities are operating.

Understand the working environment

Confirm practical access, emergency procedures and the process for raising concerns with the actual operator. Do not use this fictional catalogue as evidence of compliance or availability.

This question sheet does not replace training, risk assessment or professional guidance. Follow the verified institution's approved instructions.
